

Intelligent Retrieval Information System

Desktop IRIS

Desktop IRIS

Desktop IRIS allows you to quickly and reliably find information stored in your desktop computer and on any network drive that you can access. The software follows the security policy for the desktop and network operating systems, allowing full search capabilities locally and on your network(s). It also takes full advantage of an expandable and collapsible tree pane for directory display and easy e-discovery.

The main features of Desktop IRIS are:

Email Support

It allows you to easily search Outlook email, contacts, calendar and notes to find information without having to remember dates, email contents, recipient lists or sender lists. Its powerful search features allow you to rapidly find virtually anything stored in your Outlook email system including attachments.

Network Support

It enables you to quickly access information stored in your desktop and network paths. You have full control over indexing and updating information stored in all accessible locations.

Website Downloading

It gives you the ability to download information from any website such as letters, articles, reports or the whole website. Once all the information is downloaded, it is automatically indexed and made available for searching in Desktop IRIS, allowing you to browse website content even when you are offline.

*Intelligent Retrieval
Information System*

Desktop IRIS

Ease of Use

You only require minimal computer experience to install and use the Desktop IRIS program. You can easily download the program and start searching your desktop computer and Outlook email right away.

Why Desktop IRIS?

- Requires minimal computer experience to install and use
- Provides online support and detailed instructions in a “questions and answers” format on downloading, registering and using the tool
- Narrow searches by file type with built in and customized filters
- Different color schemes are available for Desktop customization based on user preference
- Does not impose any restrictions on the number of files or folder locations that the tool is capable of indexing
- Enables Boolean, proximity, range, wildcards and fuzzy searches
- Summarizes and highlights keyword search results
- Support searching documents written in languages other than English
- Integrates seamlessly with Network IRIS

How does it work?

Desktop IRIS allows you to search Microsoft Office documents, OpenOffice files, Outlook email and attachments, HTML, zip, XML and many other file formats. You can search for words, terms, and phrases and obtain instantaneous results. Search results are displayed in a tree pane that displays information about the hierarchical organizational structure of desktop directories, network paths and downloaded websites.
